INFO.**DO NOT CIRCULATE**SUPPLEMENT TO
REPORT NO.

25X1X

Following is additional information on the power plant in Odessa
(30°43'E/46°27'N), Ukrainian SSR:

The boiler and turbine house, equipped with one 30,000 kw AEC turbine, one Soviet turbine with approximately the same capacity, and one 10,000 to 15,000 kw turbine of American origin, was still being enlarged in August 1947 to facilitate the installation of additional boilers and turbines, according to German electricians. Being in need of repair the Soviet turbine often failed.

25X1A

 Comment:

a. Although old, this report is forwarded as the first to give information on the turbine capacity. As there are discrepancies in all reports, additional information is required to determine the actual number of operating turbines and obtain confirmation on the capacity.

b. The plant location, south of the agricultural machine factory and east of the oil harbor, as well as the plant layout were sufficiently determined from previous information.
